Hiring Manager
Sarah Group
Eastwood, Adelaide, SA

Re: Data & AI Engineer

Dear Hiring Manager,

I am writing to apply for the Data & AI Engineer position at Sarah Group. As a Computer Science (Advanced) student at Adelaide University, I have built a solid foundation in SQL, NoSQL, Python, and data engineering through production project work, and I am excited by the opportunity to contribute to your Data & Analytics Platform while growing alongside an experienced team.

Through the Daily Iftar Registration System, a live platform I built and continue to support for a University club, I designed MongoDB data models and RESTful API contracts that power event registration for 70+ daily users. I have delivered and monitored features under continuous deployment, using version control and code review to maintain platform stability while shipping new functionality. I also diagnosed and corrected a recurring data-quality issue by re-architecting the system's timezone-aware date handling, the kind of practical troubleshooting this role calls for.

I also bring direct experience building and testing data pipelines. For a distributed systems project, I engineered a multi-threaded data aggregation server with persistent storage, crash recovery, and automated stale-data expiry to keep datasets trusted and current under concurrent load, backed by a JUnit test suite. Across an industry project with Maptek, I additionally built CI/CD pipelines and automated testing frameworks for my team, which increased team velocity significantly.

I am particularly drawn to this role's blend of production data engineering and applied AI, and to the opportunity to keep developing my skills on a live, enterprise-scale platform. I would welcome the chance to discuss how my background could support Sarah Group's data and analytics goals.

Thank you for your time and consideration.

Sincerely,
Sharzil Hasnine
